

K-Station Viewer

KOMORI Kare

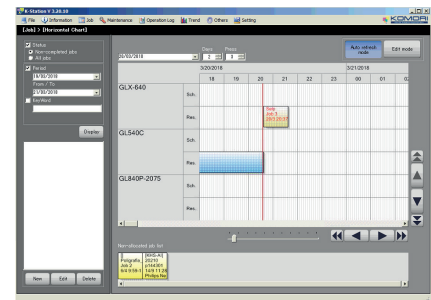

K-Station Viewer is a stand-alone software that allows viewers to view the current production process in the pressroom from another location. Working in conjunction with K-Station Ver 3, the software itself is easily accessible from the workstation where it is installed.

K-Station Viewer allows an unrestricted amount of people to view the ongoing situation and processed reports in the pressroom. This is beneficial to the group of colleagues who work closely with printers and can easily update themselves by logging in to the system. K-Station Viewer does not allow users to modify any data, this stays under control of the designated main user.

Benefits

- A higher return on investment.
- Increase in productivity.
- Less waste of time by only selecting jobs instead of preparing tickets.

KomoriKare offers a transitioning software too, that will enable users to go from K-Station Viewer 2 to K-Station Viewer 3. This is especially helpful when you are already accustomed to working with the software and want to benefit even more.

Specifications

Product name **KomoriKare
K-Station Viewer**

Packaging **USB Flashdrive**
