

Underpacking Adhesive

K-Supply

Our K-Supply Underpacking Adhesive prevent the underpacking sheet from slipping out during the printing plate change. When special attention is given to the adaption of cylinder circumference and printing length, this high-performance product works even better.

The used protective film prevents wrinkling, while simultaneously sealing off the adhesive surface against dust, resulting in a long service life. Carefully chosen raw materials achieve maximum thickness precision, resulting in maximum printing quality.

This product, tested at the Komori Graphic Center-Europe, is highly effective and suitable for all sheetfed and web offset printing presses.

Benefits

- Highly resistant to swelling and tearing.
- Easy to place under printing plate or rubber blanket.
- Soiled foils can be cleaned using washing agents.
- Remains stable during (high-volume) printing jobs.
- High thermal stability up to 60°.

Specifications

Product name	K-Supply Underpacking Adhesive
Application	For efficiently streamlining of rubber blankets
Suitable	Available in different sizes, suitable for specific printing presses.
Packaging	Underpacking in packs of 5.
