Ott Imprimeurs adds Komori GL-840 H-UV-L (LED) perfector to press room

French-based printing company Ott Imprimeurs has decided to replace a Komori GL-840 H-UV perfecting press in their 6.600 sq. metre press room in Wasselonne, Bas-Rhin. Created more than 130 years ago, this company has always been at the forefront of technology.

To aim for the highest level of customer satisfaction, the working methods and machinery of Ott are constantly evolving. The company remains at the forefront of technical progress and performance, especially with this new installation.

The new GL-840 H-UV L (LED) perfecting press will replace a first-generation GL-840P H-UV, becoming the 3rd Komori press in the production area, next to a GL-440 H-UV-L and GL-540 with coater. This investment results in the 6th Komori machine since the beginning of this partnership in 2012, making Ott a true 'Komori printing house'.

The Komori GL-840P with H-UV-L is known for its printing speed of 15,000 sph, while offering possibilities to commercial printers due to the 720x1,030 maximum sheet size. With a numerous of installed features including the fast A-APC plate changer, OTT will increase their productivity even further. The H-UV technology lets sheets dry instantly, which reduces production time, improves quality and enables customers to deliver to their customers faster.

François Trollé, General Sales Manager for Komori France: "I am pleased to say that Ott Imprimeurs have chosen another Komori press. They have been a longstanding customer, familiar with the workings of our equipment and how to utilise those to their best interest. I am confident this press will help OTT meet their customers' demands better than before and I am excited for them to start printing on it following the installation in May."
